Nguyen Khanh Hoa

QA Engineer | Manual & Automation Testing

Phone: 0702935541 **Email:** nguyenkhanhhoa3541@gmail.com **Location:** Tan Binh District, Ho Chi Minh City, Vietnam

Professional Summary

QA Engineer with 2+ years of experience in **manual and automation testing** for enterprise web applications and e-commerce platforms. Builds UI automation frameworks in **Java** (Selenium WebDriver, TestNG, Page Object Model) and integrates them into **GitHub Actions**, reducing manual regression time by ~65%. Experienced in API testing (**Postman**), performance testing (**Apache JMeter**) and UI automation with **Playwright** (TypeScript). Prior ReactJS development experience supports early defect detection and effective collaboration with developers in Agile/Scrum teams.

Technical Skills

Test Automation	**Selenium WebDriver** (Java), **TestNG**, Page Object Model (POM), Data-Driven Testing, **Playwright** (TypeScript)
Testing Types & Techniques	Functional, Regression, Smoke/Sanity, Exploratory, Integration, API and Performance Testing; Boundary Value Analysis; Test Planning & Strategy; Shift-Left Testing
API & Performance	**Postman** (collections, environment variables, automated assertions); **Apache JMeter** (Thread Groups, Assertions, throughput and bottleneck analysis)
Programming	**Java** (OOP) - Proficient; **JavaScript/TypeScript**, HTML/CSS - Intermediate; **Python** (scripting, test data generation) - Working knowledge
CI/CD & Tools	**GitHub Actions**, **Git/GitHub**, **Jira**, Confluence
Databases	SQL for data validation: MySQL, PostgreSQL, SQL Server - Working knowledge
Process	Agile/Scrum, SDLC/STLC, Defect Management, Root Cause Analysis
AI-Assisted Testing	Uses generative AI to draft and refine test cases and test data

Work Experience

AGEST VIETNAM

06/2024 - Present

QA Engineer (Manual & Automation)

Ho Chi Minh City, Vietnam

- Responsible for end-to-end testing of enterprise web applications; work with Product Owners and developers to refine acceptance criteria and detect defects early (Shift-Left).
- Built and maintain a UI automation framework in Java using Selenium WebDriver, TestNG and Page Object Model; adopting Playwright (TypeScript) on new projects.
- Integrated the automated regression suite into GitHub Actions, reducing manual regression time by ~65% and giving the development team faster feedback on each change.
- Developed and maintain Postman collections to validate business logic at the API layer, independent of the UI.
- Run performance and load tests with Apache JMeter (500+ concurrent users) and identify bottlenecks such as slow database queries.
- Mentor junior testers and interns on Agile processes, test case design and Java automation basics.

NAM PHUONG DIGITAL TECHNOLOGY 12/2023 - 05/2024

Frontend Developer Intern (ReactJS) Ho Chi Minh City, Vietnam

- Developed responsive UI components with ReactJS, HTML5 and CSS3.
- Fixed cross-browser compatibility issues, reducing UI-related bugs by ~20% before QA handover.
- Gained working knowledge of the DOM, RESTful APIs and browser DevTools (Network, Console, Elements), later applied to UI automation and root cause analysis.
- Collaborated with backend developers on API integration, gaining insight into request/response flows relevant to API testing.

Featured Projects

Safe Railway - Enterprise Ticketing & Logistics System 06/2024 - 02/2025

Focus: Test Automation & Performance Testing

Client project delivered as part of the QA Engineer role at AGEST Vietnam

Tech Stack: Java | Selenium | TestNG | Apache JMeter | GitHub Actions | MySQL

Railway management and booking system serving 5,000+ daily active users, with dynamic pricing, real-time seat mapping and integrated payment gateways.

- Defined the test strategy covering functional, integration and performance testing.
- Built an automated regression suite from scratch (Java, Selenium, TestNG) covering 100+ user flows, including search, reservation and mock payment.
- Configured GitHub Actions to run automated tests on every deployment to staging.
- Designed JMeter load tests simulating holiday peak traffic (500+ concurrent users) and worked with backend developers to cut booking API response time from 3.5s to under 1.2s (over 65% faster).

Omnichannel E-Commerce Platform 03/2025 - Present

Focus: Test Automation & API Testing

Client project delivered as part of the QA Engineer role at AGEST Vietnam

Tech Stack: Playwright (TypeScript) | Postman | Python | Jira

Omnichannel e-commerce platform supporting 5,000+ SKUs across three sales channels (web, mobile, POS), with real-time inventory management, cart workflows and multiple third-party logistics integrations.

- Introduced UI automation with Playwright and TypeScript, improving test execution speed compared with the team's legacy scripts.
- Performed API testing with Postman to verify inventory synchronization between web and mobile channels.
- Wrote Python scripts to generate test data for edge cases such as flash sales and negative inventory.
- Performed exploratory and boundary value testing on the checkout flow to keep the post-release defect rate low.

Education & Certifications

TON DUC THANG UNIVERSITY – Bachelor of Software Engineering | **GPA: 7.61 / 10**

• Certification: **Agile Development & Scrum Framework Professional** (10/2023)

• English: **Working proficiency** (CEFR B1, Aptis General, 03/2024) - able to read technical documentation, write bug reports and communicate with international colleagues in daily work
